

# Unique Dual Index Kit (193–288)

Catalog No.	Amount	Lot Number
634754	96 rxns	Specified on product label.

## Description

Unique Dual Index Kit (193–288) contains unique dual-indexed PCR primers for amplification of indexed Illumina®compatible NGS libraries. Each unique dual index (UDI) consists of two premixed oligos, which are supplied in a volume of 5 µl in a 96-well plate format and can be used with many of Takara Bio's RNA-seq or DNA-seq kits. Please refer to the kit-specific user manual for instructions on using the indexed PCR primers provided in UDI kit.

NOTE: Prior to use, spin in a tabletop centrifuge to bring the contents to the bottom of the wells.

## Package Contents

• 5 μl of each UDI, U193–U288 (6.25 μM/oligo, 12.5 μM total/oligo pair, 96-well plate format)

## **Storage Conditions**

• Store at -20°C.

## **Expiration Date**

• Specified on product label.

## Shipping Conditions

• Dry ice

## **Product Documents**

Documents for our products are available for download at <u>takarabio.com/manuals</u> The following documents apply to this product:

- Unique Dual Index Kits Protocol-At-A-Glance
- Unique Dual Index Kit (193-288) Indexes and Plate Map

## **Quality Control Data**

All primers were verified by ESI analysis to have a major peak with a measured molecular weight within 10 Da of the predicted molecular weight.

All primers were functionally tested with first-strand cDNA generated with reagents obtained from the SMARTer® Stranded Total RNA-Seq Kit v2 - Pico Input Mammalian. The libraries were pooled, quantified, and sequenced on an Illumina sequencing platform. No primer resulted in a library with reads 40% above or below the average reads of all libraries. Data was assessed for uniform representation of all the barcodes ( $CV \le 25\%$ ).

It is certified that this product meets the above specifications, as reviewed and approved by the Quality Department.
